

Attachments for Stand Up Forklift

Stand Up Forklift Attachments - IC engine powered lift trucks are labeled in accordance to the fuel used. Type "G" lift trucks are gasoline fueled. They meet the minimum standards for fire hazards. This is the most typical designation found on lift trucks fueled by gasoline. Forklifts labeled "G" are not used in unsafe locations for apparent reasons. Type "GS" lift trucks are fueled by gasoline and meet all requirements of a Type "G" truck and include different devices installed to the exhaust and electrical and fuel system in order to allow them to be used in certain hazardous sites. Type "GS" trucks are used in similar applications to Type "EE" electric forklifts.

Type "LP" lift trucks are LPG fueled and do meet the minimum standard for fire hazards. This is the most widespread designation used on gasoline fueled lift trucks. The forklifts labeled "LP" are not used in hazardous places. Type "LPS" forklifts are fueled by LPG and meet all the standards of a Type "G" truck. They have other pieces of equipment established to the fuel system, exhaust system and electrical system to allow them to be used in some dangerous applications. Type "LPS" trucks are used in similar applications to Type "GS" and Type "EE" electric forklifts.

As dual fuel units, the "G/LP" lift trucks may be operated on either gasoline or LPG. These trucks should not be utilized in unsafe locations, yet meet minimum standards for fire hazards. Type "GS/LPS" lift trucks are dual fuel units for the reason that they may be operated on gasoline or LPG without any alteration to the fuel system. These lift trucks meet all of the requirements of a Type "GS" or Type "LPS" truck and include different machines installed to their electrical system, fuel system and exhaust system, so as to allow them to be used in some dangerous applications. Type "GS/LPS" trucks are utilized in similar applications to Type "GS", Type "LPS" and Type "EE" electric lift trucks.

Type "D" trucks indicate diesel fueled and meet the minimum requirements for fire hazards. These lift trucks labeled "D" are not used in unsafe locations. Type "DS" forklifts are diesel fueled and meet all the requirements of a Type "D" truck and have different machinery installed to the fuel system, exhaust system and electrical system in order to allow them to be utilized in some unsafe sites. Type "DS" lift trucks are used in comparable applications to Type "GS", Type "LPS" and Type "EE" electric trucks. Type "DY" trucks are diesel fueled and satisfy all the requirements of Type "DS" lift trucks and also do not include whatever electrical equipment installed. These utilize air starters and include provisions for limiting the temperature of truck parts. These type forklifts are utilized in similar application to the Type "EE" electric forklifts.
