

## Forklift Fork Positioners

Forklift Fork Positioner - A fork positioner is a tool constructed out of top quality materials designed to endure the most challenging operations and work environments. This particular piece of equipment could enable the one driving to work the blades hydraulically without leaving the seat. Side shifting models have the extra ability to be able to laterally position the entire load or the arms in order to facilitate much more accurate carrying and position in a faster and more effective manner.

The only one of its kind fork pocket design can enable operators to be able to safely sway the unit's forks without any worry of destroying the positioning cylinders. This could allow the operator the alternative to either perform independent or simultaneous blade movement, depending on the requirements of the job. For most lift trucks with non-OEM carriages, complete carriages are considered necessary. Standard OEM carriages can be transformed into fork positioners on available units.
