

Aerial Work Platform

Aerial Work Platforms - There are a variety of forklift attachments offered on the market. They could help transform your forklift so that you could expand your ability to pick items up or accomplish clean up tasks and material handling with less effort.

A few accessories were particularly utilized for the forks themselves. For example, blade extensions can be utilized when you require more fork length, that increases lifting capacity. Fork extensions come in lengths ranging from 48-120 inches. Rounded or triangular attachments are one more variety used whenever transferring rolled material to be able to ensure it does not roll off of the standard flat blades.

Lifting attachments could be pivoting and telescoping crane accessories. They come in numerous kinds. These attachments are usually used for transporting lumber, metal bars, poles or whichever type of bulky things. Other attachments like different kinds of hooks and hook plates are presented to carry objects with a chain or sling. Magnetic lifters and slab lifters are other stuff which can be used along with hook accessories. Slab lifters are specialized attachments that are intended for carrying different materials which are delivered in a sheet or slab format. Carpet poles and rug rams are other lifting tools which connect to your lift truck so as to make moving rolls of carpet a lot easier. The attachment hooks onto the forklift's blades and has a pole that goes through the middle of the carpet roll.

There are several different types of forklift attachments which can be meant for facility maintenance like for instance snow forks. These forks connect to front end loaders and could transport materials like for example snow, dirt and soil. Other common cleanup attachments include standard sweepers and magnetic sweepers. Standard sweepers comprise a broom that the forklift forks hook onto for sweeping large spaces like parking lots or warehouse and factory floors. The magnetic sweeper is the same except that it has a magnetic plate rather than bristles. The magnetic sweeper is used in areas where there is lots of metal fragments such as on shop floors for instance. Sweepers have widths up to 60 inches and this surface area makes clean up effortless and quick.

Material spreaders are other attachments used on lift trucks. These spreaders are handy for various applications such as spreading insecticides, seeds, ice melt, rock salt, pellets and fertilizers.

Work platforms are another optional lifting accessory that many businesses use day after day. The platforms range in size from 36" x 36" to up to 60" x 60". There are several units available which are capable of folding up and storing into a smaller space. Work platforms are designed to raise staff up to an overhead location with the use of the lift truck. Larger platform units have added space for personnel to bring tools and other essential stuff for the task. Often work platforms are constructed of poly material or steel.
